USRobotics®

Using a matched pair of USR9108 ADSL routers a peer to peer VPN bridge can be established. Additionally the 9108 acts as a firewall and WiFi access point.

Note: VPN connections are suitable for general e mail, small file sharing, thin client and remote control applications. Large file transfer and heavy database applications will run slowly as a result of the bandwidth available through your broadband/ADSL connection. Some ISPs filter out VPN packets deliberately forcing you to buy a business version of their service. Fixed IP addresses help when creating VPN tunnels and only cost a few pounds per quarter. These final two points can be addressed by talking to your ISP.

With

Using the USR8200 and 9107 combination an enterprise class firewall and VPN connectivity solution can be created allowing up to 253 external VPN tunnels to teleworkers or branch offices. In addition, using the 8200 USB or Firewire connectivity an FTP server can be installed within minutes.

Note: VPN connections are suitable for general e mail, small file sharing, thin client and remote control applications.
